**24.** Answers may vary. For example: If both coordinates are positive, the point is in Quadrant 1. If the  $x$ -coordinate is negative and the  $y$ -coordinate is positive, the point is in Quadrant 2. If both coordinates are negative, the point is in Quadrant 3. If the  $x$ -coordinate is positive and the  $y$ -coordinate is negative, the point is in Quadrant 4.

If the  $x$ -coordinate is 0, the point is on the  $y$ -axis. If the  $y$ -coordinate is 0, the point is on the  $x$ -axis.
